

The BeadBlaster™ 24R Refrigerated Microtube Homogenizer completely lyses, grinds and homogenizes a broad variety of biological samples. A powerful refrigeration system protects heat sensitive samples during homogenization.

The stainless steel tube carrier subjects up to 24 samples to an optimized, high speed, 3D motion, producing high energy impacts between the samples and micro-beads to release cellular contents. After processing samples can be centrifuged and the lysate removed with a pipette.

Operating parameters for the BeadBlaster 24 are set and displayed digitally. Up to 50 homogenization profiles can be stored in memory and recalled for future use. A mechanical lid lock prevents opening the lid while the BeadBlaster is in operation. A powerful compressor maintains chamber temperature while the brushless motor reduces motor noise and provides maintenance free operation.

Benchmark offers an assortment of prefilled tube kits for a variety of sample types. The popular Triple-Pure™ kits include acid washed, heat treated, zirconium beads. The beads are tested to be free of nucleases, making them ideal for molecular biology applications. A convenient starter kit (D1032-SK) is available to accommodate a broad range of sample types and optimize applications.
